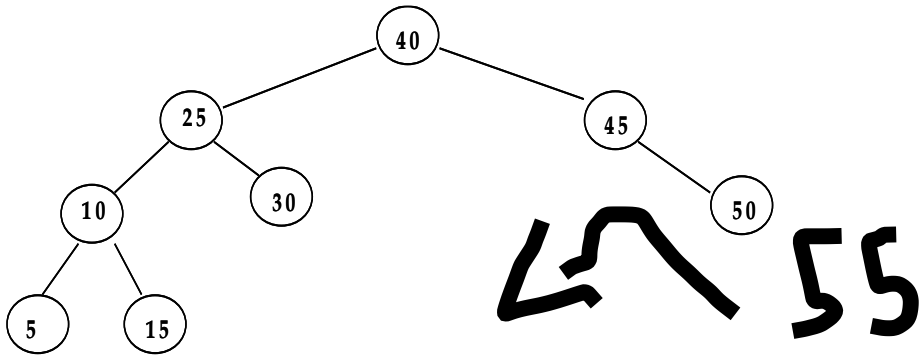
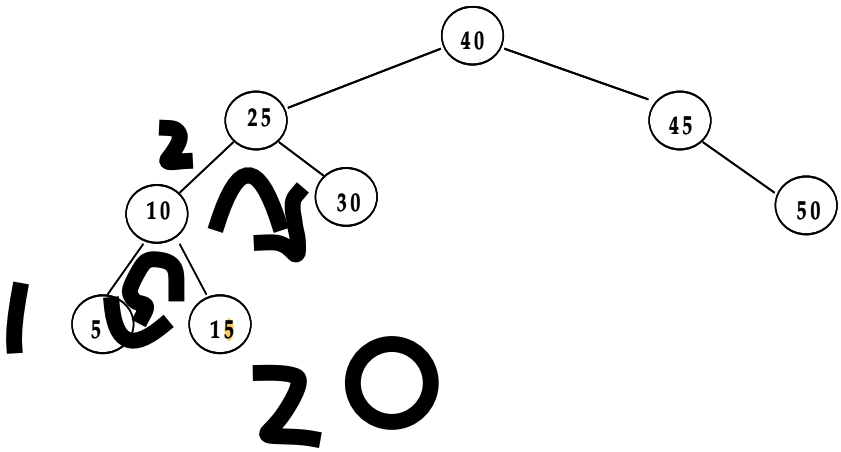
AVL Exercise

The following tree is an AVL tree. Starting with the original tree, indicate the balance factors in the starting tree. Now show the tree after inserting 55. If a rotation (or double rotation) is required, indicate what type of rotation is required and the root of the rotation. Show intermediate steps if a double rotation is required in addition to showing the resulting tree.





The following tree is an AVL tree. Starting with the original tree, indicate the balance factors in the starting tree. Now show the tree after inserting 20. If a rotation (or double rotation) is required, indicate what type of rotation is required and the root of the rotation. Show intermediate steps if a double rotation is required in addition to showing the resulting tree.
